

V-CAST

IP COMMUNICATION SYSTEM

V-CAST SERVER

V-Cast is a communication server that manages registered stations. Thanks to its scalability, it is used in small systems operating locally, and enables the creation of a geographically dispersed system, consisting of many servers connected via the Internet.

It is also possible to make the server available with a public IP address. Thus, VoIP devices can register to the server via the Internet.

V-Cast Communication Server supports internal VoIP and analogue subscribers. It also provides integrated communication with external systems and PSTN via SIP, digital, analogue and GSM connections.

INTERCOM FUNCTIONALITY

- Individual calls
- Audio calls
- Video calls
- Group calls
- General calls
- Call queuing
- Redirection
- Conferences
- IVR
- Message storage
- Device monitoring
- API integration
- Redundancy
- Visualisation
- Call recording
- Message recording

PUBLIC ADDRESS FUNCTIONALITY

- Evacuation messages
- Alarm messages
- Background music
- Speaker monitoring
- Flexible division into speaker zones

EASY MANAGEMENT

Configuration of system components is made via a web browser.

WIDER FUNCTIONALITY

As a software developer We are able to implement new functions fulfilling Your needs.

IP INTERCOM

We have a wide range of intercoms and video intercoms for various application areas.

IP PUBLIC ADDRESS

IP network speakers are perfect for creating micro-zones as well as for the large area systems. IP technology allows for dynamic creation of groups (zones) of speakers and individual adjustment of the volume for each loudspeaker.

IP TELEPHONY

VoIP phones have become the standard of modern communication. We offer standard office and special-purpose telephones (industrial, ATEX, sterile).
